

Hello,

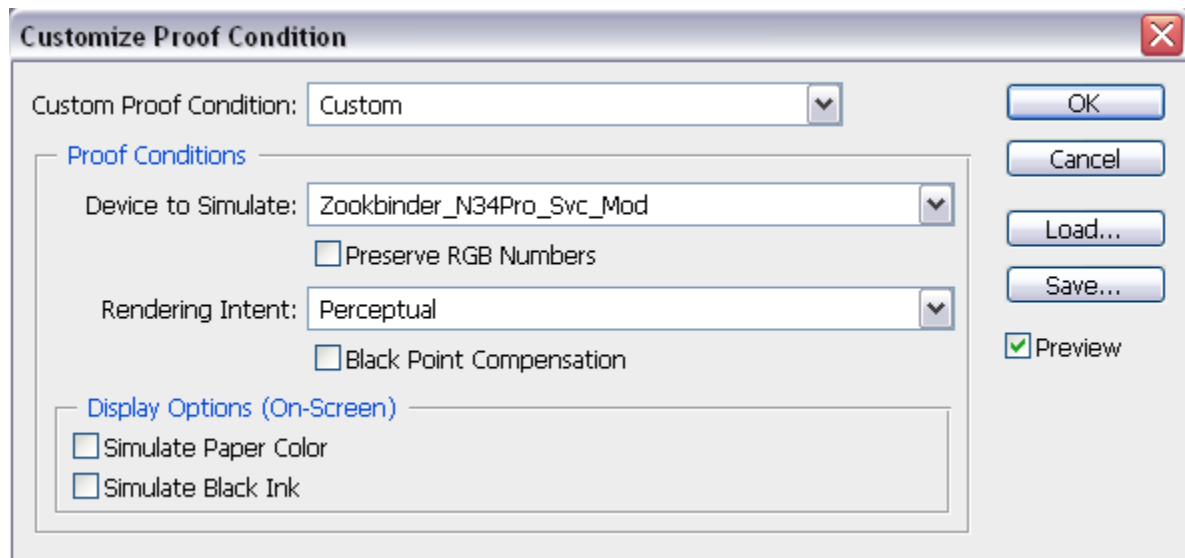

Attached please find the Zookbinders Noritsu Soft Proofing Profile.

Step 1

- For PC users, please move the file to your desktop. Right click on the icon and choose “install”.
- For Mac users, in your finder, click on your hard drive icon, then go to Libraries – Color Sync – Profiles and drop the file in that folder.

Step 2

For all users - go to Photoshop and open up a file (image) that you want to proof. Click on View – Proof Setup – Custom and refer to the Screen shot below... make sure all the options are identical to the screen shot. To see the “before and after” click the preview button on and off to see the difference. Click the “save” button and name your new profile “Zookbinders” (or what ever is the easiest for you to remember). Click ok and adjust your images as desired. You can also toggle the view on and off by clicking the keyboard command “Ctrl – Y”.

This proof information is not to be attached to the files; it is only for you to do your color corrections. When you are done, save your images. if you need to reopen your images or designs later, you will need to turn the profile back on to view it (it automatically turns off when you close the file). Use the command “Ctrl –Y” for PC users and “Command/apple – Y” for Mac users to turn the profile back on (or off).

I hope this helps, please let me know if you have any questions or concerns.

Thank you,
